

5000 SERIES HOLLOW COIL PACKERS

FOR DIRECT MOUNTING TO MACHINE

The 5000 Series Hollow Coil Packer is designed for direct mounting to seed drills to give the proven advantages of coil packers without the trailing of a separate unit. Hollow section steel is used to reduce overburden weight while downward spring pressure is maintained by heavy-duty adjustable springs.

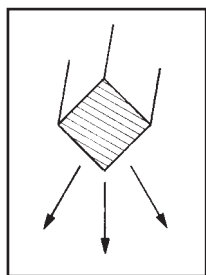

This versatile system is easily adjustable to suit various applications i.e. set straight for packing only or set on angle to give some levelling of the seed bed. It is also available with spring tine or rotary harrows.

5000 Mounted Hollow Coil Packers complete with Rotary Harrow option.

- Excellent pressing of seed - good seed to soil contact is essential for germination
- Excellent trash handling ability
- Moisture retention - firming and sealing of worked ground conserves valuable moisture
- Heavy duty mount arms - interchangeable with spring tine harrows
- Can be combined with ridge dividers or K2000 Rotary Harrows - for excellent field finish

THE UNIQUE V-SHAPED PROFILE DISTRIBUTES THE WEIGHT OF THE PACKER (197kg/m) AS SHOWN TO RETAIN MOISTURE AND IMPROVE GERMINATION.
