

TRASH-FLOW SOLUTIONS

EASY-FIT K55 COULTER KITS

Advantages of **K55** Coulters:

- Simple fitting adjustments
- Robust construction & design
- Fully bushed pivots (non-greasing)
- Pivoting for ease of cornering

Upgrade your tine seeder with an easy-fit coulters kit to take the stress out of seeding your crop. Added benefits of the K55 coulters are decrease in soil throw, increase in point life & less downtime at seeding time, taking away the dreaded wrapping of vine type weeds.

2700 Trashcutter

Breakthrough in Residue Management

Treat your stubble residues as a valuable asset; put them to work for you!

The 2700 Trashcutter is a fast, simple and effective unit used to effectively mulch both winter and summer stubbles. This has proven an extremely useful tool in providing residue cover for conserving moisture over the summer and autumn periods.

K-Line is currently making sales in NSW, VIC, WA & SA. Farmers are proving this machine to cut & spread evenly on the surface with little soil disturbance, facilitating the biological processes in breaking down the stubbles & returning nutrients to the soil.

Unique benefits of the Trashcutter system:

- Cutting up summer weeds
- Little or no soil disturbance
- Root system lift intact in the soil giving a holding power to minimize wind erosion
- Extremely even trash distribution giving excellent trash-flow
- Ability to angle discs for soil disturbance when incorporating chemicals
- Control cutting of stubble and other vine weed, bushes and grasses.

K44 **POLY-TIPPED** HARROWS

- Excellent for stubble retention & seed-to-soil contact
- Independent flotation
- Large high-wearing replaceable tine
- Fully adjustable angle and durable steel drum
- Ideal for increased seed soil contact in the presence of trash.
- Interchangeable
- High grade polymer designed for maximum wear resistance & shock loading

1000 **SPRING** TINE HARROWS

K-Line Spring Tine Harrows have excellent leveling & trash handling ability. We have a large range available, ensuring there is a spring tine harrow to suit a vast range of soil conditions & working methods.

- Adjustable tine angles – flexibility in the field

- 3-Row & 4-Row models available

K2000 **ROTARY** HARROWS

K2000 Rotary Harrows are versatile harrows ideal for a wide range of working methods, conditions & soil types. Rotary action is excellent for stubble management, trash handling & weed control with residue being spread at top of soil profile. Rotor types available are standard, rocky & rice modules.

- Proven advantage for both minimum till & conventional tillage applications
- Excellent for stubble retention & weed control
