Rotary Rakes

Throughout recent years the team at K-Line has seen a need to supply a rotary rake designed to meet the needs of the Australian farmer/contractor. Through extensive research and development K-Line has developed and launched the 9000 Series twin-rotor rakes, setting a new standard within the Australian market place. Emphasis at K-Line has been to produce the 9000 series rake to a benchmark in standards, specifically needed in Australia's harsh climates. This has resulted in an extra heavy duty construction as is a pre-requisite in all K-Line products.

Outstanding features in these rakes are:

- * **Sealed oil bathed housings**, protecting cams and bearings from abrasive and dusty conditions commonly known amongst Australian farmers.
- * **13-arm rotors and 5 double tines per arm** – This equates to 260 raking tines, giving ability to effectively rake heavy crops to 8.4m in width.
- * **3-dimensional ground following** - Rotary baskets are pivoted with Teflon-styled DU bushes on heavy duty under-carriage allowing the rotor/s to float with the contour of the ground. This results in reduced hay contamination, increased tine life and cleaner raked paddocks.
- * **Automatic rear steer with heavy duty flotation tyres** are standard equipment, giving extra maneuverability on twin rotor rakes.
- * **Hydraulically adjustable rake arms** - altering windrow and raking width with ease.

The 9000 series rotary rakes can be supplied in three models; The **9100 single rotor** model, the **9600 twin-rotor centre delivery** and the **9700 twin-rotor side delivery**.

For more information please contact the sales team at K-Line on **1800 194 131**.

- Clean hay/forage sample
- High output (productivity)
- Robust & reliable
- Oil bathed gear boxes
- User friendly adjustments
- Models available; Centre/Side delivery & single rotors

EXTRA HEAVY DUTY DX SERIES V-RAKE

K-Line's top of the range DX/ST Series V-Rake's have recently been complemented with twin rear steer axles. This heavy duty configuration has been favored for its ability to ride across deep gutters, pivot track and ruts much smoother. Multiple castor wheels have also been added giving contractors the assurance that whatever the paddock conditions are, raking can be completed with speed at ease. DX/ST Series rakes can be supplied with widths from 6.5m through to 14.6m and supplied with a full range of options, including splitter kits, hydraulic fold, rear wheel steer and inline combinations.

DELTA COMPACT SERIES V-RAKE

A new product in the past two years is the Delta Compact Series V-Rake, designed specifically for the farmer and grazier. The Delta Compact rake represents excellent value for money with a list of features usually only available on more expensive rakes. Features such as bushed pivots (grease not required), independently sprung reel and hydraulic reel lift, enable safe and efficient operation and maximise hay quality. This robust Australian built rake is proving its worth in the paddock.

Value for money!!
