## **SPEED TILLER**

*By K-Line Industries*

The K-Line SPEEDTILLER is a highly effective disc-tilling machine ideal for soil conditioning in the presence of high levels of crop residues. With a full soil disturbance, trash is cut and distributed evenly providing a protective barrier to retain moisture.

The K-Line SPEEDTILLER operates best at high speeds, giving a fuel efficient operation and allowing stubble residues to pass easily through tined seeders. A depth gauging roller is provided at the rear giving the desired crumbling effect on the soil profile and excellent seedbed preparation.

Engineered for strength & durability, the specialised design of the SPEEDTILLER produced by K-Line Industries is in a class of its own for superior soil management.
