

# Better system for stubble

**T**HE K-Line Trashcutter System has been extensively developed by K-Line Industries over the past four to five years, in conjunction with agronomists and farmers requiring a better system for stubble management.

The team at K-Line has been focusing on supplying equipment to assist farmers in the management of heavy residues built up in the soil as a result of years of farming with conservation farming techniques.

Progressive farmers have long realised the benefits of conserving and mulching stubble as opposed to removal or burning.

Increased microbial activity – resulting in reduced fertiliser requirements, increased carbon content of soil, and retention of moisture – is one of the advantages of mulching and retaining stubble. Three of the products recently released to the marketplace after extensive field testing are the 2700 Series Trashcutter, the K55 Series Coulters and the Speed Tiller.

The 2700 Series Trashcutter represents a breakthrough in trash and stubble management.

The advanced design lays the stubble to one side and then slices the stubble and bruises

Easy-Fit K55 Series Coulters are built by K-Line Industries in heavy-duty single and double-coulter assemblies. K55 Coulters are an excellent tool for stubble/viney weeds.

with self-sharpening discs into short lengths. The angle of aggression and operating depth can also be hydraulically adjusted to vary effectiveness for weed control and the mulching of the trash.

Easy-Fit K55 Series Coulters are built by K-Line Industries in heavy-duty single and double-coulter assemblies.

These robust units can be mounted to existing seed drills and toolbars or 'in-frame' using

an offset mount system supplied by K-Line Industries.

K55 Coulters are an excellent tool for stubble/viney weeds. Models are available for simple fitting to suit most seed drills.

The Speedtiller has been developed to assist in cutting up and incorporating heavy residues into the top layers of soil to increase soil organic matter and improve soil performance. Increased soil organic matter is necessary for microbial activity

The 2700 Series Trashcutter represents a breakthrough in trash and stubble management.

The Speedtiller has been developed to assist in cutting up and incorporating heavy residues into the top layers of soil to increase soil organic matter and improve soil performance. Increased soil organic matter is necessary for microbial activity in the soil and for nutrient efficiency.

in the soil and for nutrient efficiency. The Speedtiller is ideally used at high speeds (12-16km/h), giving maximum cultivation and excellent weed control.

Soil is levelled efficiently, leaving a smooth seed bed and allowing drills or other tine tillage equipment to pass through without blockages. Heavily constructed, the Speedtiller has the ability for deeper working penetration, together with an excellent trash flow design.

It can be supplied in a range of sizes (1.75m through to 6m in

three-point-linkage models with or without folding wings, or trailing hydraulic fold models in sizes ranging from 4.5m to 12m).

The latest product to be released at K-Line is the Track-Attack. Don't get stuck in a rut this season. This new machine

has superior trash-handling ability, thanks to the twin-row opposing angle disc setup. The soil is moved evenly and uniformly to the wheel track from each side alternately, thus eliminating the blockages commonly experienced in trash conditions.

You also have the option of putting K-Line's Spring Tine Harrows on the rear of the Track-Attack to further enhance the Track-Attack's superior levelling ability.

There is also a full range of harrows and packers available including rotary harrows, spring tine harrows, harrow bars, coil packers and Cambridge rollers.

For more details, please contact K-Line to be directed to the nearest reseller in your area.

Visit [www.k-line.net.au](http://www.k-line.net.au) for more information on all products or call the team at K-Line Industries on 1800 194 131 for more information or to arrange a demo.

## The 3 E's

- ✓ Efficient seedbed preparation
- ✓ Effective weed control
- ✓ Excellent stubble incorporation

- Proven ability to mulch and breakdown trash residue, increasing microbial activity
- Australian made for Australian conditions
- Models available from 2.25m to 13m (working width)
- 3PL & trailing models
- Other Stubble Management Systems available

## Mend plastic items

PLASTIC is commonplace now and most people have had an experience with a broken plastic part that can be repaired with the right equipment.

The kinds of plastic items that can be mended include children's toys, automobile and motorcycle parts, lawn furniture, industrial equipment, pipes, buckets and containers, tanks, flooring surfaces or

basically any plastic repair job.

Why throw items out when plastic welding is fast, secure and simple with the right equipment?

The Lansite DSH-E is a top-of-the-range industrial welder that is robust and will last many years.

The kit comes with instructions so anybody can start fixing your broken items immediately.

### Bull At A Gate

## Fencing & Logging

Rural Fencing, Cattle Yards, Timber & Steel, Paddock & Pasture Restoring, Bulldozer, Loader, Float Hire & Logging, Sawn Timber, Hardwood Fence Posts, Strainers, Shed Posts etc, Farm Effluent Pumping.

**Based in Tarzali Covering All Nth. Qld.**

### SAW SHARPENER

Sharpens any saw blade (tungsten and HSS) up to 400mm in diameter. Comes with diamond and HSS blades. Easy to operate, fast and accurate sharpening.

\$250 inc GST

### PLASTIC WELDER

Plastic welding is fast secure and simple. No workshop should be without one!

\$420 inc GST

### CHAINSAW SHARPENERS

**Precision sharpening every time** with these fantastic 85W 240V electric sharpeners. Chainsaw sharpener can be run from a car battery with an inverter or set up in the shed. Will sharpen all 1/4 and 3/8 chains at correct angle.

Great value at \$108 inc GST
