

**PRODUCTS THAT OUTPERFORM.  
RELATIONSHIPS THAT MATTER.**

That's what makes K-Line one of the best in the world.

**K-LINE AG**

# WE KNOW WHAT HARD WORK MEANS.

## HARD WORK BUILDS GREAT MACHINES.

K-Line tillers, trashcutters, and hay rakes help farms work more efficiently, more effectively, and more profitably. Plain and simple. But there's nothing plain and simple about how we do it. We get out there. We roll up our sleeves. We get our hands dirty. We live and breathe farming. As a result, we create machines that work, machines that crank, machines that make a difference to the farms of tomorrow and to the farmers who use them. Day in. Day out.

The K-Line seeder has been a worthwhile addition to my farming operation, enabling me to perform my seeding operations in one pass. The high breakout pressure of the primary tine has enabled me to place Big N at a depth of 10cm, well below the seed. This deep cultivation has also dealt with any issues of Rhizoctonia.

Ross Graham,  
CropCommander owner

## HARD WORK BUILDS GREAT PARTNERSHIPS.

We put a lot into the machines we manufacture. But no amount of investment and innovation matters if we don't back it up with strong relationships—so we do.

We create solutions that farmers want. How do we know what they need? Because we ask them. We're out in the fields with them. We hear their issues. We feel their pain. Our customers are as much a part of our research and development process as our own employees are. What they need is what we give them.

Creating great machines is just half of the equation. Creating great conversations and great collaboration is the other half. When farmers have questions, we answer them. When they have challenges, we solve them. When they need something new and different, we deliver. That's what separates us from the competition. That's what partnerships are all about. With K-Line, the relationship doesn't end with the sale. In fact, that's when it begins.

The secondary tine in association with the press wheel enables me to accurately control deed depth of canola, wheat oats, and various pasture species.

# THESE AREN'T JUST GAME-CHANGERS, THEY'RE FARM-CHANGERS.

Maybe you're struggling with an increasing amount of residue and trash due to GM crops. Maybe you're having a hard time with chemical resistant weeds. Or how about inefficient disc tillage tools that require multiple passes to create adequate seedbeds? As farming evolves, its demands become greater and greater.

That's why we're here.

Our machines are compatible with all U.S., Canadian, and Australian tractors. They're durable, reliable, and undeniably efficient. Since we source our materials globally, we're not limited by geography and we're able to acquire whatever we need to make the best products.

Together it all adds up to one thing: better, more sustainable farms.

## Speedtiller

The Speedtiller is a high-performing dual purpose disc-tilling machine used for soil conditioning with superior penetration. It can efficiently cut, size and incorporate high levels of crop residue, which increases the carbon content of your soil. Soil erosion from wind and water is drastically reduced by the Speedtiller's excellent incorporation ability. It handles heavy residue with ease, moves the dirt of an offset, and is an excellent finishing tool for levelling and one pass seedbed preparation. It's able to operate under extreme conditions.

- Effective weed control
- Excellent trash flow & incorporation
- Superior penetration
- One pass seedbed prep

## Hay rakes

Models include compact and inline options with various widths and sizes available. Robust construction and durability have become hallmarks of K-Line equipment, and our range of hay rakes is no exception. The extra heavy-duty design of these rakes ensures longevity and lower maintenance even in the harshest of field conditions.

- Versatile design
- Rugged construction
- Minimal hay contamination (better hay quality)
- Fully sprung reels

## Trashcutter

The advanced design of the Trashcutter lays stubble to one side and then slices it with self-sharpening discs.

Traditional mulching methods leave stubble lying on the ground's surface, making it extremely prone to wind erosion. By using the Trashcutter, more stubble crown remains in the soil and becomes a barrier for shielding cut stubbles. This is key for retaining your stubble and minimizing wind and water erosion. Its ability to simply cut and drop means stubble and residue are left evenly distributed over the ground's surface.

- Low horsepower requirements
- Even distribution of trash
- Minimal soil disturbance
- Low erosion

Customers are very happy with the job that these machines are doing in a wide range of conditions. I have personally talked to several customers who have used many other machines and every single customer has said that they liked

the K-Line the best. I have not heard one customer comment that they were not impressed with the Speedtiller.

Ken Barlott  
Rental Division Manager, Flaman Group

# A LIFETIME COMMITMENT TO THE FARMER. AFTER ALL, WE WERE FARMERS, TOO.

## Where we come from and where we're going.

K-Line Ag has been in operation for more than 20 years. It was started by Richard Larsen, who saw the need and opportunity for a broader, more efficient range of tillage machinery.

But the company's farming expertise started long before that.

Back in the early 1900s, Richard's grandfather, Harold, began farming. While that was certainly what started the family's continued involvement in and dedication to farming, the true inspiration behind the company Richard created in 1993 was his recognition of a niche in the market for a broader, more efficient range of tillage machinery.

K-Line remains a family-owned and operated business to this day. Richard's sons work alongside him. James is the company's Director of Finance and Administration. Bill is Director of Sales & Marketing. David is Director of Operations & Development. Their decades of collective experience in the farming industry provide key insights and first-hand knowledge that drive the design of every K-Line product. Together, they're ensuring the company continues its dedication to delivering farmer-centric, farm-forward machines. The significant success the company has experienced in the Larsen's home country of Australia has now become international. K-Line Ag continues to expand and thrive in the U.S., Canada, and the world at large.

## Our dedication to our company ensures our dedication to you.

### Mission

To partner with farmers to create advanced agri-tech solutions and care for the land. Our aim is to provide exceptional service and cultivate trusted relationships for life.

### Vision

To be globally recognized as a leader in the tillage industry.

### Core Values

**Innovation:** We have a passion for change and innovative solutions.

**Care:** We care for all the people and the land.

**Respect:** We build enduring relationships through teamwork, humility, sincerity and respect for all.

**Integrity and Trust:** What we say, we do.

My family farms 1700ha of irrigation in the Finley area. We became interested in Speedtillers because of the need to produce seed beds in fewer passes – especially in a double crop program. We saw the K-Line in action against its competitors at an Elmore Tillage and Seeding Day and decided it was head

and shoulders above all others. Since buying the machine we have used it for primary tillage through simple weed cultivation and it has fulfilled all tasks easily. My only problem is that we have three implements it has replaced that we now have to sell.

-Andy Plattfus, 6m Trailing Speedtiller owner
