

EASY FIT COULTER KITS

Easy Fit Coultter Kits are heavy-duty units available in both single and double coultter disc assemblies. These robust units can be mounted to existing toolbars or 'in-frame' using an offset mount system supplied by K-Line Ag. The Easy Fit Coultter Kits have heavy duty, well protected bearings for ease of maintenance, and bushed pivots for low maintenance in demanding conditions.

UNIVERSAL EASY FIT TO SEEDER FRAMES*

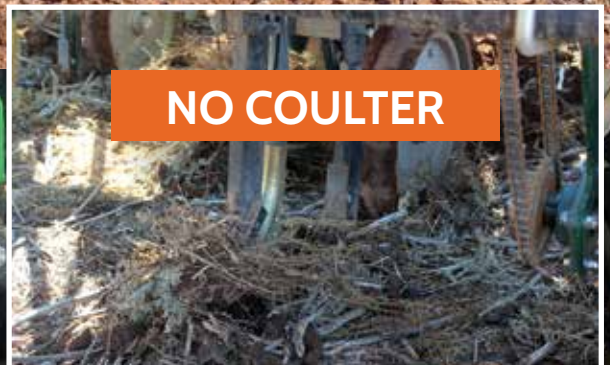

- Swivel castor for trouble-free cornering
- Adjustable spring pressure for various soil types and conditions
- Simple depth control (adjustable)
- Single disengaging pin
- Wide range of mounting options
- Non-greasable, sealed bearing mounts
- Disc options available: plain, fluted or wavy designs
- Disc sizes available: 13", 15" or 18"
- Heavy construction

APPLICATIONS AND BENEFITS

A significant advantage of K-Line Easy Fit Couler Kits is that they speed up the sowing process by preparing the way for the tine to pass through the soil and minimising trash entanglement. Without a couler to aid this process, a tine will cause excessive soil disturbance when breaking through the soil, which results in trash blockages and an uneven seedbed.

Use of the couler will decrease soil scatter/spray, helping to maintain accurate seed depth and retain trash residue. This allows you to benefit from increased moisture retention and less soil erosion. In addition, retained trash residue will maximise nitrogen for future crops.

IDEAL FOR CUTTING THROUGH VINEY WEEDS
